Springer London Ltd, United Kingdom, 2011. Paperback. Book Condition: New. 242 x 170 mm. Language: English . Brand New Book ***** Print on Demand *****.The use of lasers in clinical practice is increasing rapidly, both in the definitive treatment of disease and in the palliation of symptoms. Consequently, this sixth contribution to the Bloomsbury Series in Clinical Science is particularly timely. It opens with an introduction to the basic physics of lasers and then focuses on the current use of lasers in urological practice, and concludes by reflecting on their potential for the future. Edited, and with several contributions by Tom McNicholas, the book also contains contributions from a number of workers at the National Medical Laser Centre in University College Hospital, London. Given their ever widening application, there can be little doubt that lasers will be a subject the series will return to again. To date, the series has been concerned with a wide range of topics of fundamental importance in clinical science. It has now gained momentum and future titles continue to reflect its wide sphere of interest. As Series Editor, I would welcome suggestions from readers of topics and issues that could usefully be addressed in the series. Softcover reprint of the original 1st ed. 1990.
